

GUIDE : WHICH JOB TO CHOOSE SO AS NOT TO DIE

Death rate per 100 000 workers

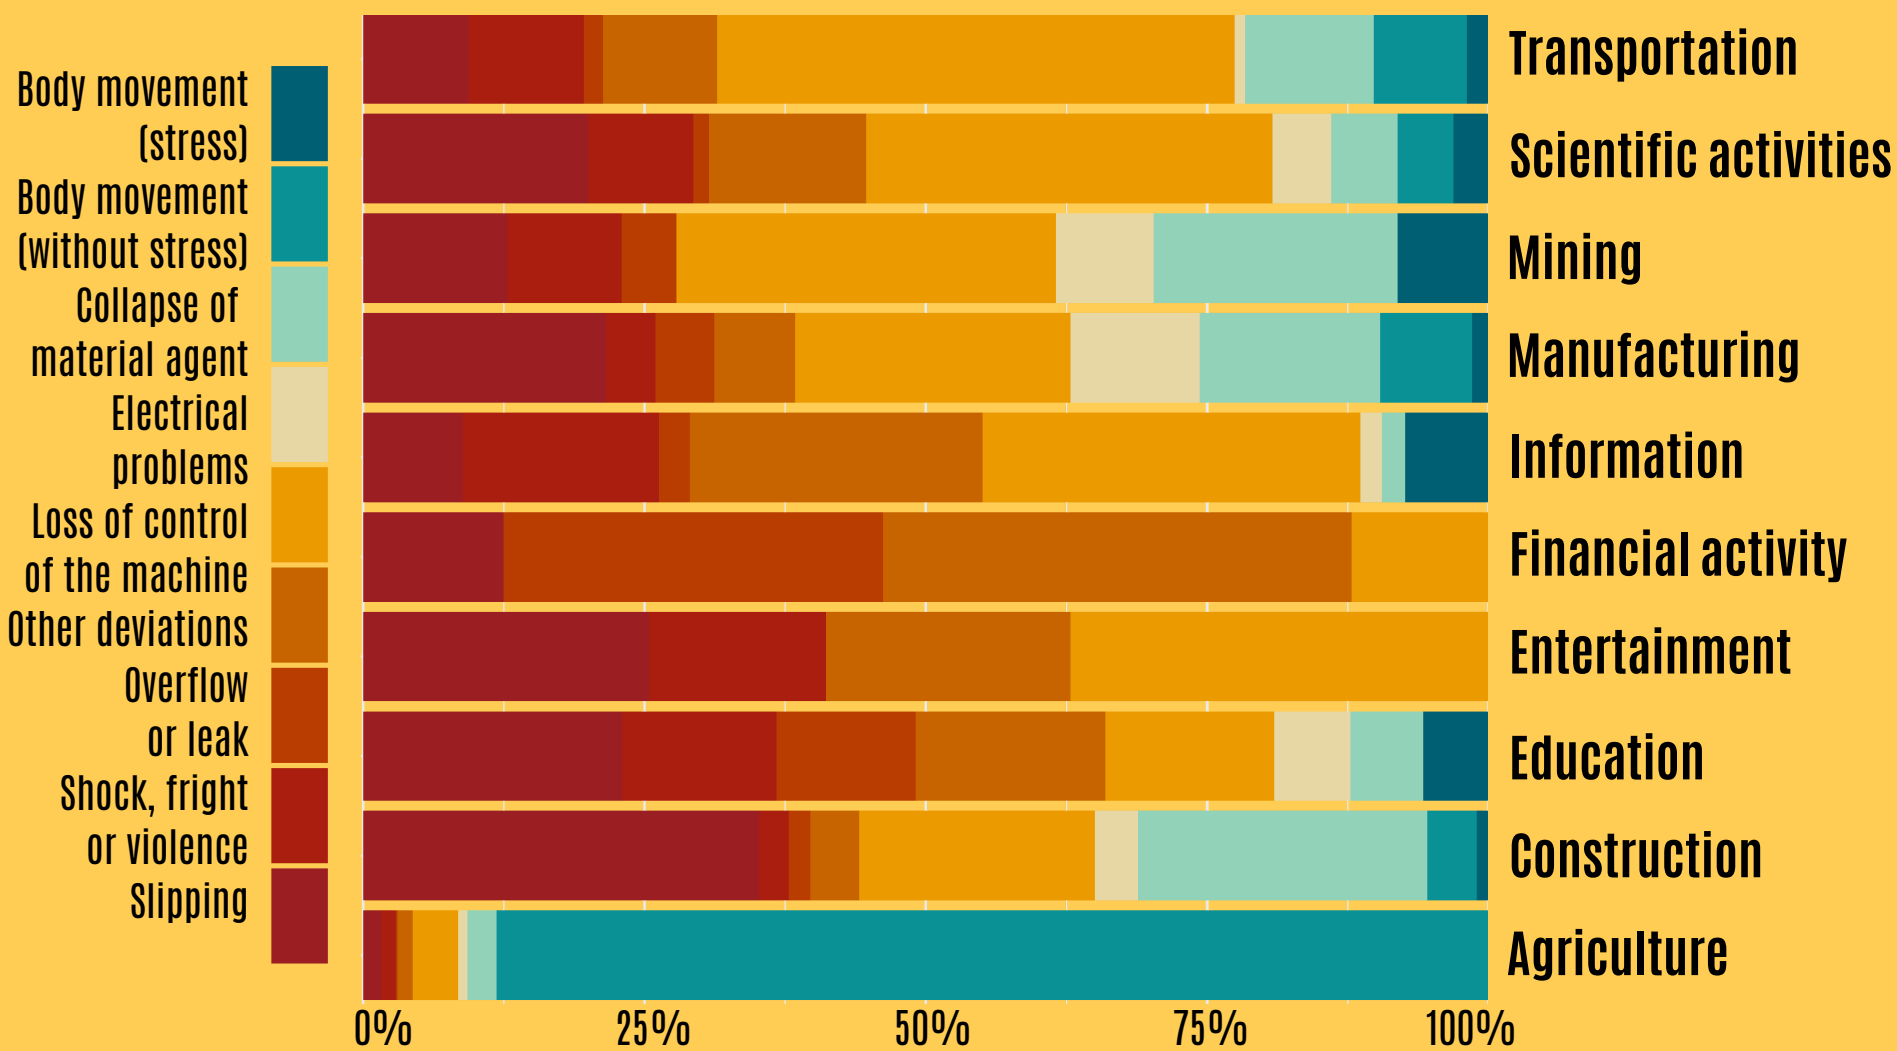

What is the most dangerous industry?

Every day, millions of people head off to work in a variety of industries that keep our world running. But for some, that job comes with a hidden cost: an increased risk of serious injury or even death. According to the European Commission, in 2021 alone, there were 3 347 fatal work injuries on the job in the EU. This sobering statistic underscores the importance of worker safety and identifying the industries where dangers are most prevalent. The agriculture, mining, transportation and construction industry experiences the highest death rate per 100,000 workers each year. This highlights the importance of enterprises participating in programs and organizations that aim to prevent fatal and non-fatal workplace injuries. An example of such a program is Vision Zero, that is based on the assumption that all accidents, harm and work-related ill-health are preventable.

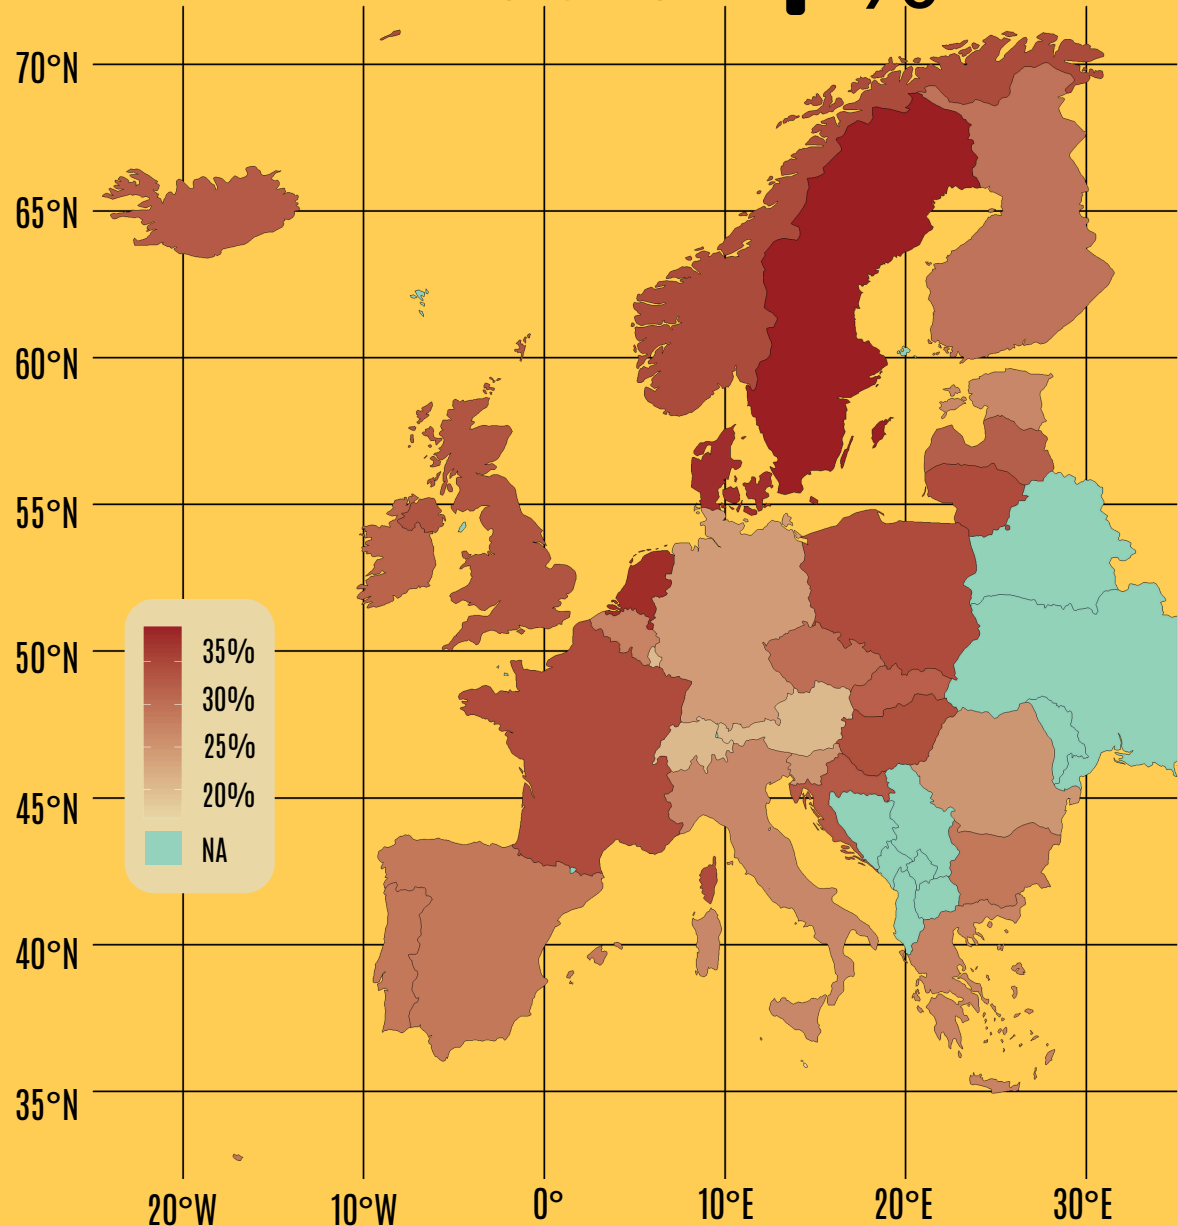

Fatal accidents at Work by Cause in year 2021

Cause of fatal accidents

The cause of an accident is defined in terms of the last event differing from the norm that resulted in an accident. The most common cause of fatal accidents at work was losing control of machines, tools or transport and handling equipment, accounting for 25.7 % of the total number of workplace deaths in the EU in 2021, while slipping, stumbling or falling (14.4 %), and breakage, bursting or collapse of material agents (12.0 %) were the only other causes that accounted for double-digit shares of the total number of such accidents.

Percentage share of women in accidents at work in 2013-2022 %

Women at work - where are the risks?

Have you ever wondered which country is the most dangerous for women? The results are surprising! At the top are the Scandinavian countries, which are known for their very high standard of living and safety of their inhabitants. On the other hand, the safest countries for women to work are primarily small states. Interestingly, in European countries, the percentage of women working in high-risk sectors such as agriculture, mining, and transport is relatively consistent across different nations. So why are so many accidents in the north?
